WELL DONE

Today's homes are not only places designed to keep us safe and secure, they are also environments that can enhance our wellness.

Crypton Home and Kravet have formed an exclusive collaboration to create a luxury upholstery fabric line that incorporates aspects of wellness. The Wellness Textures collection features Crypton Home Celliant fabric and is exclusively made by Kravet.

Celliant technology works by reflecting the user's natural body heat back to them as infrared energy, which may improve cellular oxygenation and local circulation. Its wellness benefits range from faster recovery times to improved sleep and increased energy.

Three years in the making, Celliant is the first and only woven residential fabric to combine Crypton performance (spill repellent, stain resistant, high endurance) with Celliant's radiant infrared technology.

After Crypton and Hologenix, the company that developed Celliant, collaborated on the technology, Kravet created the styles, colors and textured fabrics that are perfect for the luxury residential design market.

Both the Celliant and Crypton technologies are permanently embedded in the fibers of the Wellness Textures collection and can never wash or wear away.

The collection is woven in North Carolina and includes a soft, textural chenille; a boucle chenille; a textured weave with a subtle nod to linen; and a fabric with a chevron tweed look.

The fabrics are available in a color palette of warm and cool neutrals along with blues and greens (and of course white). Kravet.com
